

Investing in a model managed by Capital Group gives you:

- More than 90 years of experience in actively managing clients' money
- A strategy aligned with real-life client goals
- Competitive costs

In addition, we'll support you and your clients with timely quarterly updates and commentaries, portfolio construction insights based on the Capital Solutions Group's (CSG's) work and the support of our dedicated sales and distribution professionals.

Choose a portfolio strategist that puts client goals first.

[Add us to your team.](#)

Our model objectives:

Growth
Growth and income
Income
Preservation and income

Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value.

Advisory services offered through Capital Research and Management Company (CRMC) and its RIA affiliates.

The benefits of combining an active-passive approach

How American Funds and Capital Group exchange-traded funds (ETFs) work with passive ETFs to help investors

Active investing

The flexible approach found in American Funds mutual funds and Capital Group ETFs seeks to capitalize on markets in constant motion to deliver above-average risk-adjusted results over the long term.

Excess return potential

When applicable and aligned with the funds' objectives, American Funds mutual funds and Capital Group ETFs seek to provide higher returns than their benchmarks at lower risk.

Passive complement

Select passively-managed ETFs seek to increase investors' broad exposure, cost effectiveness and tax efficiency.

Tight index tracking

Passive ETFs typically seek to track their indexes.

Low cost

ETFs traditionally have lower expense ratios than actively managed mutual funds and may, in some cases, offer tax benefits as well by experiencing fewer capital gains events.

Increased diversification

An active-passive approach provides increased diversification potential.

Learn more about our
model portfolios.

All Capital Group trademarks mentioned are owned by The Capital Group Companies, Inc., an affiliated company or fund. All other company and product names mentioned are the property of their respective companies.

Model portfolios are subject to the risks associated with the underlying funds in the model portfolio. Investors should carefully consider investment objectives, risks, fees and expenses of the funds in the model portfolio, which are contained in the fund prospectuses. Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries. Smaller company stocks entail additional risks, and they can fluctuate in price more than larger company stocks. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds. Investments in mortgage-related securities involve additional risks, such as prepayment risk. The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. A nondiversified fund has the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund were invested in a larger number of issuers. See the applicable prospectus for details.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Visit capitalgroup.com for current allocations.

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.
