Management's discussion of fund performance

The fund's Class F-3 shares gained 6.54% for the year ended July 31, 2026. That result compares with a 5.57% gain for the Bloomberg New York Municipal Index. For information on returns for additional periods, including the fund lifetime, please refer to capitalgroup.com/mutual-fund-returns-F3.

What factors influenced results

During the fund's fiscal year, municipal bonds posted positive returns. The U.S. economy remained resilient, though signs of labor market softening led the U.S. Federal Reserve to implement three 25-basis-point rate cuts. Interest rate volatility drove returns while credit spreads remained range bound. The municipal yield curve remained steep, as demand for shorter maturities was consistently strong.

Both the fund and the benchmark (the Bloomberg New York Municipal Index) generated positive absolute results over the period. Curve positioning was the primary contributor to relative results. Security selection and sector decisions contributed to a lesser extent. Municipal yields rose at the short end of the curve and fell at the long end. The fund maintained a modest long-duration position relative to the benchmark, averaging 1.06 years longer, with an overweight to the long end and an underweight to the short end of the curve.. From a sector perspective, an overweight to corporate bonds contributed the most to relative results. Underweights to the special tax and housing sectors contributed as well. Security selection within the health care and corporate sectors was particularly additive. Investment choices in education and general obligation bonds also contributed.

Duration positioning detracted from relative results. Security selection within the tobacco and special tax sectors also detracted.

Portfolio quality summary* (percent of net assets)

* Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch as an indication of an issuer's creditworthiness. In assigning a credit rating to a security, the fund looks specifically to the ratings assigned to the issuer of the security by Standard & Poor's, Moody's and/or Fitch. If agency ratings differ, the security will be considered to have received the highest of those ratings, consistent with the fund's investment policies. Securities in the "unrated" category (above) have not been rated by a rating agency; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with the fund's investment policies.
