12 Income/credit

14 Municipal

16 Short term

18 Other fixed income offerings

Figures shown are past results and are not predictive of results in future periods. Returns for mutual funds are based on Class F-2 shares. Current and future results may be lower or higher than those shown. Prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Market price returns for the ETFs are determined using the official closing price of the fund's shares and do not represent the returns you would receive if you traded shares at other times. For current information and month-end results, refer to capitalgroup.com.

Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value.

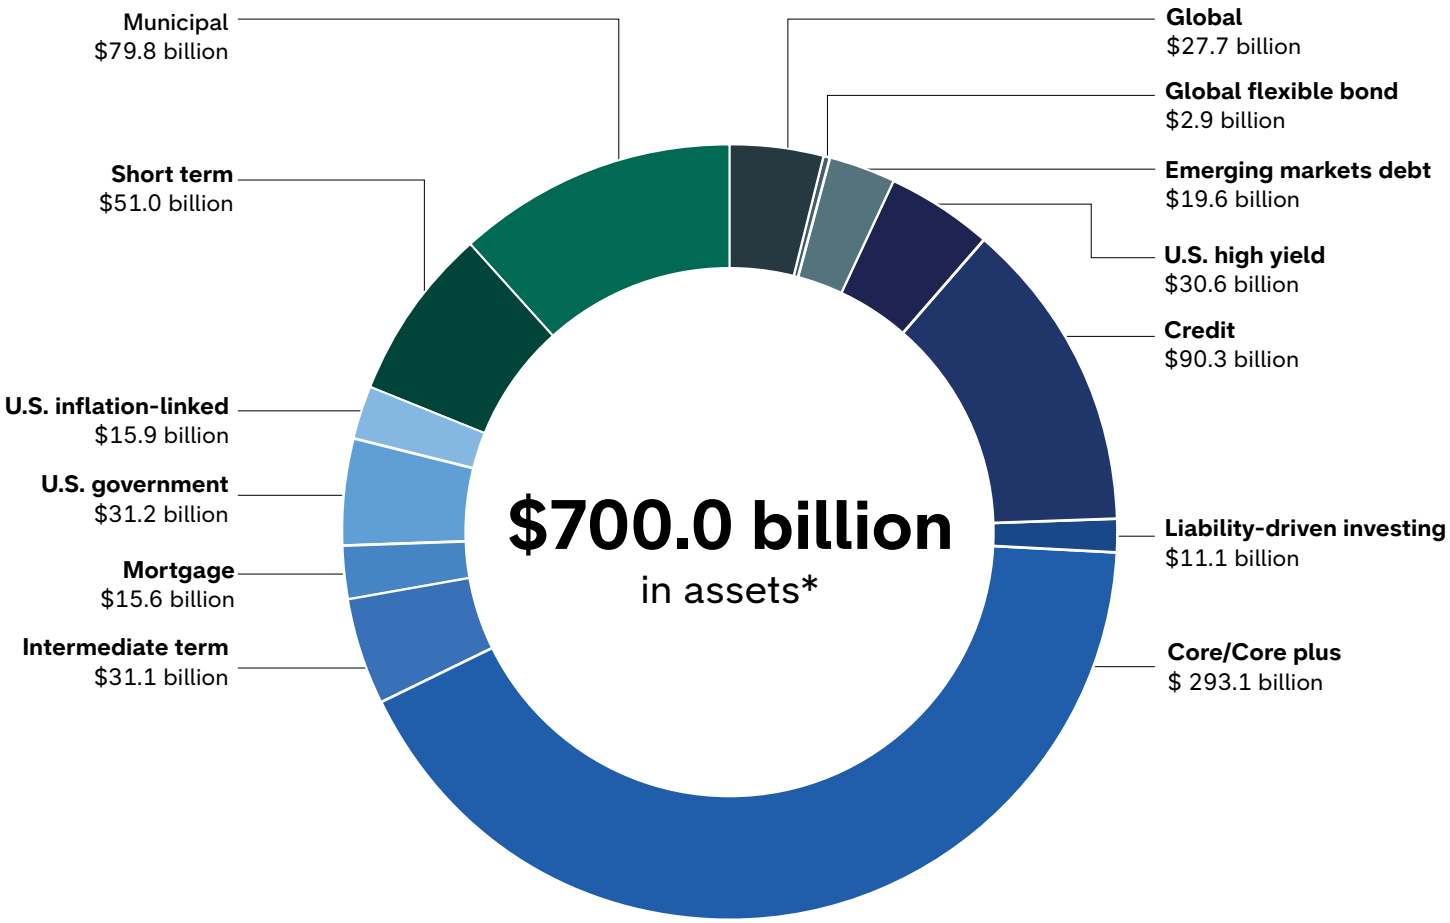

Our broad experience can help investors go further

Extensive fixed income capabilities*

For over 50 years, helping fixed income investors navigate market challenges remains one of our top priorities. Our team performs rigorous analyses to identify a variety of opportunities and trends. We address broad investment goals by investing in an expansive set of fixed income sectors.

Assets by strategy

*As of 6/30/26. All values in USD.

We're committed to helping investors ...

Integrated research

Research is the backbone of our business and is essential to delivering superior results for our investors over the long term.

Collaboration and communication

Our global team of 261 fixed income investment professionals includes 41 portfolio managers who average 26 years of investment industry experience.*

Portfolio construction

By combining our top-down global outlook with extensive bottom-up security analysis and risk management, the Portfolio Strategy Group provides valuable insights into economic and market developments that help our portfolio managers anticipate major inflection points.

Review and risk monitoring

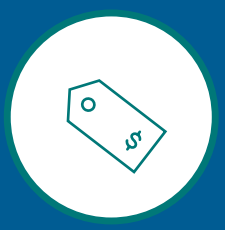

Risk management is integrated into every step of our investment process. Our dedicated Risk and Quantitative Solutions Group provides analytics and understanding of positioning and risks in a portfolio while the Principal Investment Officer monitors total risk factors.

*Investment industry experience as of 6/30/26.

… stay on course

Strategic advantages

Low cost

All of our fixed income mutual funds offer lower-than-average expense ratios versus their industry peers.*

Commitment

One hundred percent of portfolio managers invest more than $100,000 in the fixed income retail mutual funds and ETFs they oversee, with 14 of 26 funds/ETFs having at least one manager investing more than $1,000,000 in their fund/ETF.†

Stewardship

We received a "High" Parent rating from Morningstar, reflecting an investment culture marked by lengthy tenures and strong manager fund ownership that we believe promotes superior long-term results.‡

Sources: Capital Group, Morningstar.

Footnotes/Important information:

*Based on the data for Class F-2 shares as of 12/31/25. Nineteen out of 19 American Funds fixed income funds had expense ratios below the median for their respective Morningstar fee level group categories, based on institutional load funds, excluding funds of funds.

†As of 12/31/25. Manager ownership excludes state-specific municipal funds and certain newly established funds.

‡Morningstar, as of July 7, 2026. Capital Group received a Parent rating of High. Out of 190 firms analyzed, 21% also received the same rating as of that date. The parent pillar rating is a current view and is reflective of a firm's history, both recent and long-term. Morningstar Pillar Ratings: Morningstar assigns scores to the People, Process, and Parent Pillars on a -2 to +2 basis. Those scores respond to the pillar ratings assigned to a vehicle based either on an analyst's qualitative assessment or using algorithmic techniques (as explained in further detail in the "Pillar Evaluation" section of Morningstar Medalist Rating Methodology). The pillar ratings take the form of Low, Below Average, Average, Above Average, and High. The Morningstar Pillar Rating should not be used as the sole basis in evaluating a managed investment. Morningstar Pillar Ratings involve unknown risks and uncertainties which may cause Morningstar's expectations not to occur or outcomes to differ significantly from what we expected. The Parent Pillar represents Morningstar's assessment of the stewardship quality of a firm. The model considers data points such as manager retention, fees, and the firm's historical performance. The People Pillar represents Morningstar's assessment of management's talent, tenure, and resources. The model considers data points such as the number of months since a management change and manager excess return. Capital Group did not compensate Morningstar for the ratings and comments contained in this material. However, the firm has paid Morningstar a licensing fee to access and publish its ratings data. For more detailed information about these ratings, including its methodology, please visit Morningstar's website.

Turning short-term headwinds ...

Fixed income volatility is often driven by seismic shifts in macroeconomics and other markets

In a world of ever-present risks and unpredictable markets, relying on a static basket of unmanaged bonds may not result in the best possible outcomes. But as markets shift, research can unearth opportunities.

The key roles in pursuit of ...

Navigate the complexities of the vast global fixed income universe

Depending on an investor's needs and risk appetite, fixed income can pursue a variety of outcomes. In moments of uncertainty, it's important to stop and reflect on the basic role of fixed income in a portfolio.

Focus on the fundamental benefits of fixed income

Diversification from equities

When stocks struggle, owning bonds with a low correlation to equities can result in lower portfolio volatility.

Income

Providing dependable income is a central function of a bond allocation.

Capital preservation

A fixed income allocation should help protect principal in most market environments.

We believe fixed income has a unique ability to provide these roles in a portfolio and investors can pursue them in varied ways, depending on their goals.

… successful outcomes through all markets

Now may be the time to assess your fixed income position

Finding opportunities to enhance yield while managing the growing credit risk is critical for investors.

Examples of how our fixed income funds can serve clients' needs (for a 40% fixed income allocation)

D. Diversification from equities | C. Capital preservation | I. Income

Clients need: A strong core bond allocation

†If American Funds Multi-Sector Income Fund is not yet available on your platform, an equal combination of American High-Income Trust, American Funds Emerging Markets Bond Fund and American Funds Corporate Bond Fund can be substituted.

Past results are not predictive of results in future periods.

The portfolio statistics are a weighted average of the funds in the asset allocation approach and are as of 6/30/26. Equity index proxy used is the S&P 500 Index. The asset allocation approach is hypothetical and for illustrative purposes only. We have identified which funds contribute to a particular role of fixed income based on the fund's investment strategies. The extent to which a fund contributes to a specified role depends on the portfolio's composition at any point in time.

Allocations, holdings, yields and other data shown do not reflect an actual portfolio. Financial professionals should tailor client recommendations to their individual circumstances.

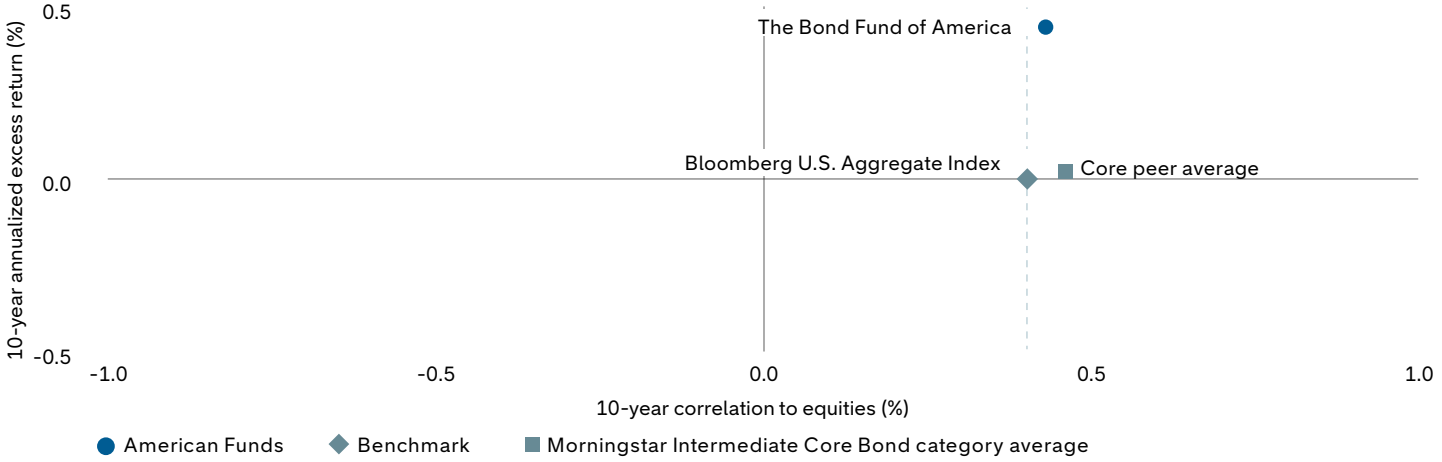

Refer to the glossary on page 18 for more information.

Aim to anchor portfolios with ...

Bond Funds That Behave Like Bond Funds®

Regardless of whether equity markets are volatile, interest rates are rising or credit spreads are widening, what investors expect from bond funds remains the same: alpha, income and ballast. A true core bond fund should seek to provide elements of the roles of fixed income, maintain a quality-oriented portfolio and deliver consistent excess returns versus its benchmark.

Footnotes/Important information:

*As of 6/30/26. Excess return shown over the core benchmark, the Bloomberg U.S. Aggregate Index. Correlations shown to the S&P 500 Index.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses. Class F-2 shares were first offered on August 1, 2008. Class F-2 share results prior to the date of first sale are hypothetical based on the results of the original share class of the fund without a sales charge, adjusted for typical estimated expenses. Results for certain funds with an inception date after August 1, 2008, also include hypothetical returns because those funds' Class F-2 shares sold after the funds' date of first offering. Please refer to capitalgroup.com for more information on specific expense adjustments and the actual dates of first sale.

ETF market price returns since inception are calculated using NAV for the period until market price became available (generally a few days after inception).

Keep a more satisfying portion of your income ...

Preserve capital while generating income

While taxes should never be the primary driver of an investment strategy, better tax awareness does have the potential to improve investors' after-tax returns. When reviewing the tax impact on their investments, investors should consider an asset allocation strategy that may help maximize their investments' tax treatment.

Put your money to work and ...

Consider an alternative to cash-like investments

Volatility investors experienced in 2022 and 2023 brought on by rising interest rates, inflation concerns and geopolitical risks served as a reminder of the importance of balancing goals of reaching for higher returns while managing risk. A short-duration approach to fixed income investing may help alleviate concerns of interest rate volatility.

Fixed income glossary

Risk and other key statistics

Correlation

A statistical measure of how a security and an index move in relation to each other. A correlation ranges from -1 to 1. A positive correlation close to 1 implies that as one moved, either up or down, the other moved in "lockstep," in the same direction. A negative correlation close to -1 indicates the two have moved in the opposite direction.

Credit risk

The probability of a borrower defaulting on debt obligations.

Distribution rate (yield)

The distribution rate for all funds except money market funds is based on dividends paid over the last 12 months divided by either the maximum offering price or net asset value price plus any capital gains paid in the last 12 months.

Effective duration

A duration calculation for bonds that takes into account that expected cash flows will fluctuate as interest rates change.

Net high yield

Reflects high yield-rated debt holdings after accounting for credit default swap positions, which are used to hedge systematic market risk and focus exposure on the idiosyncratic risk of high-conviction credits.

SEC yield

Reflects the rate at which the fund is earning income on its current portfolio of securities, while the distribution rate reflects the fund's past dividends paid to shareholders. Accordingly, the fund's SEC yield and distribution rate may differ.

Sharpe ratio

Uses standard deviation and return in excess of the risk-free rate to determine reward per unit of risk. The higher the number, the better the portfolio's historical risk-adjusted performance.

Yield to worst

The lowest yield that can be realized by either calling or putting on one of the available call/put dates, or holding a bond to maturity.

[1] The funds are **interval funds. Repurchase Risk:** Each fund currently offers quarterly repurchases of up to 10% of its outstanding shares, which may limit shareholders' ability to liquidate their investments when and in the amounts desired; **Investment Risk:** Strategies are not guaranteed to meet objectives and are subject to loss. Past performance is not indicative of future results; **Credit and Liquidity Risk:** Each fund invests in private illiquid credit securities, and may also generally invest substantially in high-yield, lower-rated securities and structured products, all of which carry higher credit and liquidity risks; **Interest Rate and Inflation Risk:** Investments may fluctuate in response to changes in interest rates and real interest rates; **Derivatives Risk:** The use of derivatives involves various risks; **Foreign Investment Risk:** Investing outside the U.S. involves risks such as currency fluctuations and price volatility; **Non-Diversified Fund Risk:** Each fund can invest a larger percentage of assets in fewer issuers, increasing the impact of poor results from a single issuer.

This brochure must be preceded or accompanied by a prospectus or summary prospectus for the funds being offered.

If used after September 30, 2026, this brochure must be accompanied by the most recent applicable quarterly statistical updates for the products shown.

Capital Group exchange-traded funds (ETFs) are actively managed and do not seek to replicate a specific index. ETF shares are bought and sold through an exchange at the then current market price, not net asset value (NAV), and are not individually redeemed from the fund. Shares may trade at a premium or discount to their NAV when traded on an exchange. Brokerage commissions will reduce returns. There can be no guarantee that an active market for ETFs will develop or be maintained, or that the ETF's listing will continue or remain unchanged.

When applicable, results reflect fee waivers and/or expense reimbursements, without which they would have been lower. Please see capitalgroup.com for more information.

Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility. These risks may be heightened in connection with investments in developing countries **(also applies to CGCP, CGHY, CGIB, CGMS, CGCB, CGSD and CGUI)**. The return of principal for bond portfolios and for portfolios with significant underlying bond holdings is not guaranteed. Investments are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings **(also applies to CGCP, CGHM, CGHY, CGIB, CGMS, CGSM, CGCB, CGMU, CGSD and CGUI)**. Investments in mortgage-related securities involve additional risks, such as prepayment risk **(also applies to CGCP, CGSD and CGMS)**. There are ongoing fees and expenses associated with owning bond fund shares, which is in contrast to owning individual bonds. Income may be subject to state or local income taxes and/or the federal alternative minimum tax. Certain other income, as well as capital gain distributions, may be taxable. State tax-exempt bond funds are more susceptible to factors adversely affecting issuers of its state's tax-exempt securities than a more widely diversified municipal bond fund. Income from municipal bonds may be subject to state or local income taxes **(also applies to CGHM, CGMU and CGSM)**. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds **(also applies to CGCP, CGHM, CGHY, CGIB, CGMS, CGSM and CGMU)**.

Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. If agency ratings differ, a security will be considered to have received the highest of those ratings, consistent with applicable investment policies. (For American High-Income Municipal Bond Fund, such securities are placed in the lowest category, consistent with applicable investment policies. For American High-Income Trust, consistent with applicable investment policies, a security will be considered to have received the middle rating. If only two agencies rate a security, the lower rating is used. If only one rates a security, that single rating is used.) (For Capital Group Municipal High-Income ETF, such securities are placed in the lowest category, consistent with applicable investment policies. For Capital Group High Yield Bond ETF, consistent with applicable investment policies, a security will be considered to have received the middle rating. If only two agencies rate a security, the lower rating is used. If only one rates a security, that single rating is used.) Securities in the Unrated category have not been rated by any of the rating agencies referenced above; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with applicable investment policies.

The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional cash securities, such as stocks and bonds **(also applies to CGCP, CGHY, CGMS, CGCB, CGSD and CGUI)**. While not directly correlated to changes in interest rates, the values of inflation linked bonds generally fluctuate in response to changes in real interest rates and may experience greater losses than other debt securities with similar durations.

Model portfolios are provided to financial intermediaries who may or may not recommend them to clients. The portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. If a cash allocation is not reflected in a model, the intermediary may choose to add one. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Rebalancing approaches may differ depending on where the account is held. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Visit capitalgroup.com for current allocations.

As nondiversified funds, **CGCB, CGHM, CGIB, CGMS, CGMU, CGSD, CGSM and CGUI** and American Funds Emerging Markets Bond Fund have the ability to invest a larger percentage of assets in the securities of a smaller number of issuers than a diversified fund. As a result, poor results by a single issuer could adversely affect fund results more than if the fund invested in a larger number of issuers. See the applicable prospectus for details.

For American Funds Core Plus Bond Fund, American Funds Strategic Bond Fund and **CGCP**, frequent and active trading of portfolio securities may occur, which may involve correspondingly greater transaction costs, adversely affecting the results.

Funds that concentrate investments in specific asset classes, industries, markets or sectors may underperform or be more volatile than, the general securities markets or funds that do not have such concentration **(applies to CGUI)**.

The fund's use of forward currency contracts to hedge all or substantially all of the fund's foreign currency exposure could result in losses to the fund if currencies do not perform as expected. Forward currency contracts are considered derivatives instruments, and the use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds **(applies to CGIB)**.

Interests in Capital Group's U.S. Government Securities portfolios are not guaranteed by the U.S. government.

A portion of Capital World Bond Fund's, American Funds Core Plus Bond Fund's, American Funds Emerging Markets Bond Fund's and American Funds Strategic Bond Fund's distribution may be classified as a return of capital. Please see each fund's Annual Report for details.

The market indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index. There have been periods when the funds have lagged their indexes.

This content, developed by Capital Group, home of American Funds, should not be used as a primary basis for investment decisions and is not intended to serve as impartial investment or fiduciary advice.

Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. **Bloomberg U.S. Corporate High Yield 2% Issuer Capped Index** covers the universe of fixed–rate, non–investment–grade debt. The index limits the maximum exposure of any one issuer to 2%. **Bloomberg U.S. Corporate Investment Grade Index** represents the universe of investment grade, publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements. **Bloomberg U.S. Treasury Inflation-Protected Securities (TIPS) Index** consists of investment-grade, fixed-rate, publicly placed, dollar-denominated and non-convertible inflation-protected securities issued by the U.S. Treasury that have at least one year remaining to maturity, and have at least $250 million par amount outstanding. **The J.P. Morgan Emerging Market Bond Index (EMBI) Global Diversified Index** is a uniquely weighted emerging market debt benchmark that tracks total returns for U.S. dollar-denominated bonds issued by emerging market sovereign and quasi-sovereign entities. **The ICE BofAML U.S. Bond Market Option Volatility Estimate (MOVE) Index** measures the implied yield volatility of a basket of one-month over-the-counter options on 2-year, 5-year, 10-year and 30-year Treasuries. **The Chicago Board Options Exchange's Volatility (VIX) Index** is a calculation designed to produce a measure of constant, 30-day expected volatility of the U.S. stock market, derived from real-time, mid-quote prices of S&P 500® Index (SPX℠) call and put options. **S&P 500 Index** is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks.

The Capital System™

Since 1931, Capital Group has helped investors pursue long-term investor success. Our distinctive investment approach — The Capital System — is designed to deliver superior investment results. It rests on three pillars:

Collaborative research

Our portfolio managers, analysts, economists and quantitative research teams closely collaborate on our research process — sharing and debating ideas. This collaboration generates deeper insights that inform our portfolios.

Diverse perspectives

Most portfolios have multiple portfolio managers, each of whom invests part of the portfolio in their strongest individual convictions. Combining these diverse investment approaches into a single portfolio helps us pursue more consistent results, with less volatility.

Long-term view

Investment professionals invest with a long-term view, which we believe aligns our goals with the interests of our clients. Managers are rewarded more for their long-term results,[1] and most personally invest in the funds they manage.[2] Our fees are among the lowest cost active options in the industry.[3]

A history of strong investment results

74% of funds outpaced more than half of their respective peers when comparing average 10-year rolling returns. And **71%** had higher risk-adjusted returns (as indicated by the Sharpe ratio[4]) over that same time frame.[5]

Scan for current mutual fund data

Scan for current ETF data

Footnotes/Important information:

[1] Compensation paid to our investment professionals is heavily influenced by results over one-, three-, five- and eight-year periods, with increasing weight placed on each succeeding measurement period to encourage a long-term investment approach.

[2] 94% of American Funds® assets are invested in mutual funds in which at least one manager has invested more than $1 million. Source: Morningstar. Data as of 2/18/26.

[3] ~90% of funds are in the lowest quartile on fees, and nearly half are in the lowest decile of their Morningstar fee categories. Based on total net expense ratios for Morningstar Fee Level Group Broad categories for American Funds Class F-3 shares, excluding funds of funds, as of 1/31/26.

[4] Sharpe ratio uses standard deviation (a measure of volatility) and return in excess of the risk-free rate to determine reward per unit of risk. The higher the number, the better the portfolio's historical risk-adjusted performance.

[5] Data as of 12/31/25. Based on a comparison of each mutual fund with its respective Morningstar category peers. Data are based on the following share classes: Class F-2, Class M, Class 529-A, Class 1, Class P-2 and Class 4. One share class was used per fund. The analysis uses Morningstar hypothetical methodology to calculate hypothetical fund results for periods before a share class's inception. For those periods, Morningstar uses results for the oldest share class (unless the newer share class is more expensive). Source: Capital Group, based on data from Morningstar. Average 10-year rolling returns are using a 40-year look back window from 1/1/86 to 12/31/25. For each fund, with at least 10 years of returns as of 12/31/25, we calculated the average rolling return and Sharpe ratio over the 40-year period (or the fund's lifetime if it lacks a 40-year history). That average rolling return and Sharpe ratio were compared against the equivalent averages for each fund's respective Morningstar peer category on a percentile basis. Rolling returns and Sharpe ratios are calculated monthly.

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the fund prospectuses and summary prospectuses, which can be obtained from a financial professional and should be read carefully before investing.

Past results are not predictive of results in future periods. There have been periods when the funds have lagged their indexes.

Capital Group manages equity assets through three investment groups. These groups make investment and proxy voting decisions independently. Fixed income investment professionals provide fixed income research and investment management across the Capital organization; however, for securities with equity characteristics, they act solely on behalf of one of the three equity investment groups.

All Capital Group trademarks mentioned are owned by The Capital Group Companies, Inc., an affiliated company or fund. All other company and product names mentioned are the property of their respective companies.

Capital Client Group, Inc.

Capital Group and Kohlberg Kravis Roberts & Co. L.P. ("KKR") are not affiliated. The two firms maintain an exclusive partnership to deliver public-private investment solutions to investors. KKR serves as the sub-adviser of Capital Group KKR Core Plus+ and Capital Group KKR Multi-Sector+ with respect to the management of each fund's private credit assets.
