# Building a sustainable retirement income plan 

## Making retirement savings last is the most important goal for many investors. Careful planning and investment selection can help make this goal a reality.

The dividends and growth potential of these American Funds, offered by Capital Group, can help retirees keep pace with rising expenses.

Figures shown are past results for Class A shares and are not predictive of results in future periods. Current and future results may be lower or higher than those shown. Prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Unless otherwise indicated, returns shown are at net asset value and do not reflect a sales charge. If a sales charge had been deducted, the results would have been lower. For current information and month-end results, visit capitalgroup.com.

## The value of equities

The first step is to resist the temptation to invest retirement savings too conservatively, such as moving too much into short-term investments like U.S. Treasury bills. While these short-term instruments may make sense as part of a comprehensive retirement income program, their low yields and total returns typically won't cover a retiree's longterm income needs.

The tables below and on the other side show how growth-and-income, equity-income and balanced American Funds with at least a 20-year lifetime fared over rolling monthly 20 - and 10-year periods for the lifetime of each fund, assuming regular withdrawals.

- All eight funds would have had money after every 10- and 20-year period.
- Seven of the eight funds would have had more than the initial investment after 20 years of withdrawals.
- By comparison, the initial investment in U.S. Treasury bills would have remained intact in only $40 \%$ of the 20 -year periods and $42 \%$ of the 10 -year periods.*

Keep in mind that the objectives, costs, expenses and relative risks of these investments differ significantly. For example, unlike mutual fund shares, investments in U.S. Treasuries are guaranteed by the U.S. government as to the payment of principal and interest.

Eight American Funds that each would have withstood 20 years of monthly withdrawals totaling \$537,407
Results for each fund are for rolling monthly 20-year periods through 12/31/22 and assume a hypothetical \$500,000 initial investment with annual withdrawals of $\$ 20,000$ (taken monthly), increasing by $3 \%$ each year.

Many investors are concerned about how their retirement savings will fare during future declines, particularly if they are taking withdrawals. Although the past is no guarantee of future results, the table below shows that even during the worst 10-year periods, all of the funds still had money after taking withdrawals totaling \$229,278.

Eight American Funds that would have withstood 10 years of monthly withdrawals totaling \$229,278
Results for each fund are for rolling monthly 10-year periods through 12/31/22 and assume a hypothetical \$500,000 initial investment with annual withdrawals of $\$ 20,000$ (taken monthly), increasing by $3 \%$ each year.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses. The expense ratios are as of each fund's prospectus available at the time of publication. When applicable, results reflect fee waivers and/or expense reimbursements, without which they would have been lower. Refer to capitalgroup.com for more information.

Past results are not predictive of results in future periods. Investing outside the United States involves risks, such as currency fluctuations, periods of illiquidity and price volatility, as more fully described in the prospectus. These risks may be heightened in connection with investments in developing countries. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Fund shares are subject to the same interest rate, inflation and credit risks associated with the underlying bond holdings.
